Pat,

Go ahead and discharge. The samples of the flowing water may turn out better. Also, please do not forget to take DO and pH readings of the samples before you send them to the lab. Two samples are needed per week during discharge. Maximum discharge of 6 inches per day.

Regarding the DMRs, I thought they were being submitted since you would call prior to discharge with the pond results. Sreedevi will take a look at what has been submitted and we will figure out how to proceed. You do have DMRs for those facilities that I sent you electronically so you can start using those until Shane sends you his program. For the months that you did not discharge, just check the 'no discharge' box, sign and send it in.

John

John,

The results for the Birch Hill and Diaperville Lagoons are looking good but if you compare them to our permit MCL's we have exceeded them a hair in a couple of categories. Please review and let me know what you want me to do. Also, we have never done DMR's for either of the lagoons. According to my employee's none can remember ever doing them which would be 5 years ago. I have contacted Shane regarding this and he is formulating a format to follow so we can start this quarter. Please advise me if you want me to follow another course of action.

Patrick Hunt

Manager Bad River Utility
